Size Does Matter.

Our Big Block Retaining wall system boasts numerous features that appeal to everyone right from the engineer on the project, to the installer, and the owner. This system can be engineered to almost any size of job, it goes up very quickly, keeping the project on time, and the rock like look pleases the eye. It is hollow which allows the water to drain through the rock, which is filled with local aggregates avoiding high freight charges. The blocks have locating rings which allow the installer to place the rock perfectly without a lot of measuring. Its shear size (8' long x 3' high x 3.5' deep) keeps the installation time to a minimum. Colours are available as well as accessories to suit any background.

- Ideal as an effective alternative to Gabion Baskets.
- Fits large or small size projects.
- Curved or straight walls.
- Manufactured in a CSA certified facility.
